

## Perfect Steeling with Virtually No Training

*Sharp blades improve product yields, worker productivity and reduce operator fatigue.*

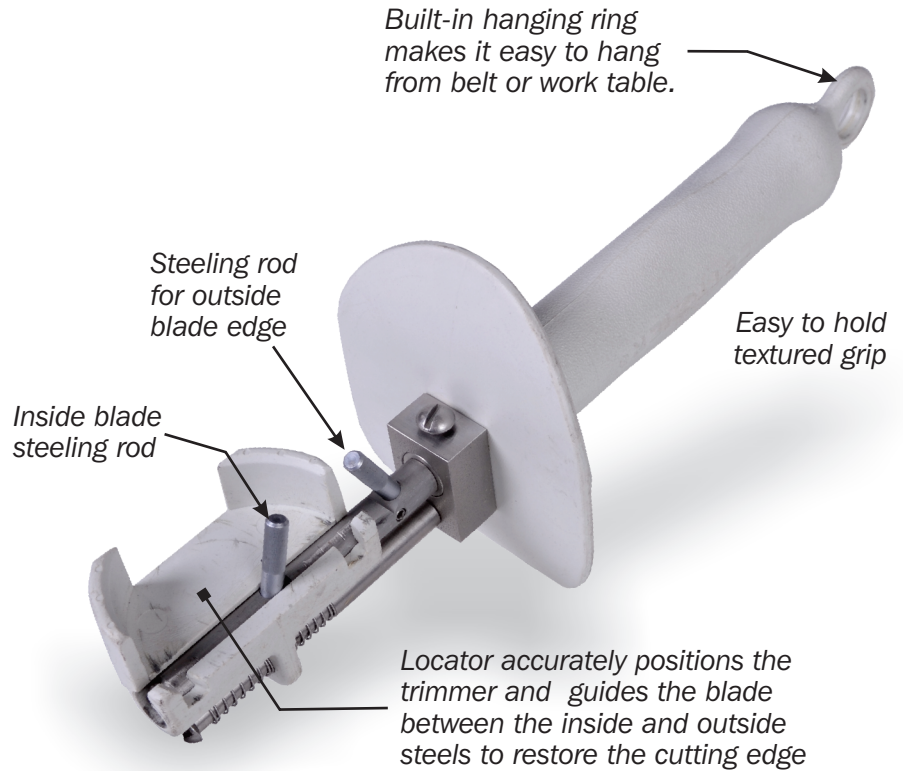

The Whizard® EdgeMaster™ Steeling Device is a productivity breakthrough that makes steeling Whizard Trimmer blades significantly easier and more repeatable than ever before. Now, any operator, with almost no training can enjoy consistently sharper Whizard blades which increase yields and reduce worker fatigue.

The EdgeMaster quickly straightens the edge of Whizard blades and practically eliminates rolled edges and ruined blades due to incorrect steeling techniques. Payback in increased yields and fewer blade sharpening can be as fast as one week. Since steeling is done at the same angle every time there may also be extended blade life.

### Perfect Steeling

Smart, simple design enables anyone to quickly restore the cutting edge accurately and consistently every time ... And steeling the blade at the same angle every time helps extend blade life.

Here is how easy it is ... simply position the Whizard Trimmer blade/housing into the EdgeMaster locator. With the trimmer running, the blade glides against an inside steeling rod and then the outside steel to restore the blade edge with only two simple motions.

Trimmer locator precisely guides the trimmer against the inside and outside blade steeling rods for fool-proof edge restoration.
